OPmobility — Recruitment Team
Levallois-Perret

Re: Application for Alternance - Data Analyst (24-month apprenticeship, starting September 2026)

Dear Hiring Manager,

I'm applying for the Alternance - Data Analyst apprenticeship at OPmobility in Levallois-Perret, starting September 2026 for a 24-month contract. I have three years of experience in business development, strategy consulting, and analysis, most recently as a Strategy and Marketing Corporate Consultant Intern at FORVIA, and I'm looking for an apprenticeship in analysis at a company I can stay with long-term.

OPmobility's own transformation — from Plastic Omnium into a company organized around exterior systems, complex module integration, hydrogen and energy storage, and embedded software — is itself a case study in the kind of market repositioning I study every week at FORVIA. Joining a group mid-transformation, rather than one that has already settled into a fixed strategy, is precisely where I think an analytically-minded apprentice can add the most value while learning the most.

Analysis has run through my whole career so far. As a Senior Analyst at GEP Worldwide, I turned raw data into decisions clients acted on, including the market research behind a 6% procurement saving. At FORVIA, I analyze competitors' technical and financial positioning for teams across Finance, M&A, Sales, R&D, Operations, Purchasing, and Legal, so my analysis has to hold up under scrutiny from very different specialists at once. My mechanical engineering degree, with coursework in Operations Research and Quality Planning and Analysis, gave me the quantitative foundation for that, and PowerBI is part of my regular toolkit.

I'm currently completing a Master in Management at ESSEC Business School (ranked #10 globally in the Financial Times' 2025 Masters in Management ranking), with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that, I did a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), with coursework in Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Production Systems Management. The engineering degree gives me a technical grounding most business-school candidates don't have, and ESSEC has given me the strategy and commercial side.

I'm available to start in September 2026, and I'd welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,

Giridhar Dhananjay Khaza Venkata
