Sanofi — Recruitment Team
Gentilly

Re: Application for Alternance 12 mois – Supply Chain Médecine Générale (12 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the Alternance 12 mois – Supply Chain Médecine Générale apprenticeship at Sanofi in Gentilly, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in supply chain at a company I can build a career with rather than pass through.

Sanofi's supply chain carries a constraint most do not: what it moves is often medically necessary, so service level is not a target to be traded against cost. That makes the planning and project work genuinely harder and more interesting. The role itself covers end-to-end stock optimisation and support for the IBP process, and my engineering training in Operations Research and production systems is the right starting point for it.

My engineering degree covered Supply Chain Management, Operations Research and Management of Production Systems, and I have since worked on the commercial consequences of those mechanics rather than only the theory. At Endosys Technologies I raised delivery satisfaction by 10% by getting departments that had been solving their own problems separately to solve them together — which is most of what supply chain work actually is. At FORVIA I analyse how product lines are positioned and how markets shift, including the geopolitical factors that decide whether a supply plan survives contact with reality.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
