Stellantis — Recruitment Team

Poissy Green Campus

Re: Application for Optimisation Des Outils de Programmation et Gestion des Stocks (24-month apprenticeship, starting September 2026)

Dear Hiring Manager,

I'm applying for the Optimisation Des Outils de Programmation et Gestion des Stocks apprenticeship at Stellantis in Poissy Green Campus, starting September 2026 for a 24-month contract. I have three years of experience in business development, strategy consulting, and analysis, most recently as a Strategy and Marketing Corporate Consultant Intern at FORVIA, and I'm looking for an apprenticeship in supply chain and project management at a company I can stay with long-term.

Stellantis operates at a scale few automotive groups can match — fourteen brands, from Peugeot and Citroën to DS and Opel, unified under one strategic roof while each brand keeps its own identity. That combination of centralized strategic direction and brand-level distinctiveness is exactly the kind of organizational complexity I find most interesting to work inside, and it mirrors the multi-team coordination (Finance, M&A, Sales, R&D, Operations, Purchasing, Legal) I currently navigate at FORVIA. Stellantis's push toward electrification and software-defined vehicles, run out of the Poissy Green Campus, is a transformation story I would value contributing to directly rather than reading about from the outside.

Supply chain is where my engineering training and my commercial experience overlap. At NIT Calicut, I studied Supply Chain Management, Operations Research, and Production Systems Management as part of my mechanical engineering degree, and as an in-plant trainee at Hyundai Motor India, I saw plant operations and team structures firsthand. At GEP Worldwide, the procurement research I delivered was for a client's car fleet — a supply chain problem end to end.

I'm currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that, I did a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), with coursework in Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Production Systems Management. The engineering degree has given me a strong technical grounding, and ESSEC has given me the strategy and commercial side.

I'm available to start in September 2026, and I'd welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,

Giridhar Dhananjay Khaza Venkata
