Renault Group / SODICAM 2 — Recruitment Team
Guyancourt (78)

Re: Application for Apprenti(e) Marketing Pièces de Rechange (req A) (24-month apprenticeship, starting September 2026)

Dear Hiring Manager,

I'm applying for the Apprenti(e) Marketing Pièces de Rechange (req A) apprenticeship at Renault Group / SODICAM 2 in Guyancourt (78), starting September 2026 for a 24-month contract. I have three years of experience in business development, strategy consulting, and analysis, most recently as a Strategy and Marketing Corporate Consultant Intern at FORVIA, and I'm looking for an apprenticeship in product and marketing at a company I can stay with long-term.

Renault Group's transformation over the past few years — the shift toward Ampere as a dedicated software-and-electric vehicle entity, the repositioning of Dacia and Alpine, the broader "Renaulution" strategy — is precisely the kind of large-scale strategic pivot I want to support from the inside rather than analyze from a distance. The Group's Technocentre in Guyancourt and headquarters in Boulogne-Billancourt bring together the engineering depth and commercial ambition that a mechanical engineer turned business consultant like myself is built to bridge.

My path into marketing runs through two different roles: at FORVIA, I study the positioning of product lines and how markets evolve around them as part of the strategic-planning process; earlier, at Endosys Technologies, I was on the front line marketing physical products through conferences, live demonstrations, and direct customer conversations, and I translated what I heard back into product changes that increased sales. ESSEC's Marketing Management coursework builds on that practical foundation.

I'm currently completing a Master in Management at ESSEC Business School (ranked #10 globally in the Financial Times' 2025 Masters in Management ranking), with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that, I did a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), with coursework in Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Production Systems Management. The engineering degree gives me a technical grounding most business-school candidates don't have, and ESSEC has given me the strategy and commercial side.

I'm available to start in September 2026. I understand the application window closes soon (apply by 31 Jul 2026), and I'd welcome the chance to speak as soon as your process allows. Thank you for considering my application.

Sincerely,

Giridhar Dhananjay Khaza Venkata
