Hermès — Recruitment Team
Bobigny

Re: Application for ALTERNANCE - Assistant Distribution Planning (H/F) (12-24 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the ALTERNANCE - Assistant Distribution Planning (H/F) apprenticeship at Hermès in Bobigny, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in supply chain at a company I can build a career with rather than pass through.

Hermès is unusual in that its production is genuinely constrained by craft, which makes the commercial and supply questions harder rather than easier — demand cannot simply be met by making more. The role itself covers distribution planning for the flow of finished products out to the international store network, and the returns and after-sales flow coming back — operating where those limits are respected rather than engineered away, which is a more interesting problem than optimising a system with slack in it.

My engineering degree covered Supply Chain Management, Operations Research and Management of Production Systems, and I have since worked on the commercial consequences of those mechanics rather than only the theory. At Endosys Technologies I raised delivery satisfaction by 10% by getting departments that had been solving their own problems separately to solve them together — which is most of what supply chain work actually is. At FORVIA I analyse how product lines are positioned and how markets shift, including the geopolitical factors that decide whether a supply plan survives contact with reality.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
