Lacoste — Recruitment Team
Paris 16e

Re: Application for ALTERNANCE - Assistant Supply Chain Central Planning (F/H) (12 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the ALTERNANCE - Assistant Supply Chain Central Planning (F/H) apprenticeship at Lacoste in Paris 16e, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in supply chain at a company I can build a career with rather than pass through.

Lacoste plans a seasonal range across markets that behave differently, so central planning is where the brand's single view meets a dozen local realities — and master data is what decides whether that view is real or fictional. The role itself covers master-data quality, the analysis of how sound that data is, and continuous process improvement inside the Central Planning and SIOP team — reconciling one brand view with markets that do not actually behave the same way, which is the harder and more interesting version of the planning problem.

My engineering degree covered Supply Chain Management, Operations Research and Management of Production Systems, and I have since worked on the commercial consequences of those mechanics rather than only the theory. At Endosys Technologies I raised delivery satisfaction by 10% by getting departments that had been solving their own problems separately to solve them together — which is most of what supply chain work actually is. At FORVIA I analyse how product lines are positioned and how markets shift, including the geopolitical factors that decide whether a supply plan survives contact with reality.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
