Moët Hennessy — Recruitment Team
Paris 1er

Re: Application for Alternance - Assistance Responsable Plateforme Supply Chain & Achats (12-24 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the Alternance - Assistance Responsable Plateforme Supply Chain & Achats apprenticeship at Moët Hennessy in Paris 1er, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in supply chain and project management at a company I can build a career with rather than pass through.

Moët Hennessy sells products whose supply is fixed years in advance by harvest and ageing, so its supply chain and purchasing cannot simply scale to meet demand — the planning is either right early or not at all. The role itself covers supporting the head of the Supply Chain and Purchasing platform through its transformation, holding the project-management discipline in place. Getting separate departments to solve a problem together is what raised delivery satisfaction by 10% at Endosys Technologies, and it is most of what a platform transformation actually asks for.

My engineering degree covered Supply Chain Management, Operations Research and Management of Production Systems, and I have since worked on the commercial consequences of those mechanics rather than only the theory. At Endosys Technologies I raised delivery satisfaction by 10% by getting departments that had been solving their own problems separately to solve them together — which is most of what supply chain work actually is. At FORVIA I analyse how product lines are positioned and how markets shift, including the geopolitical factors that decide whether a supply plan survives contact with reality.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
