Havas — Recruitment Team
Puteaux

Re: Application for HAVAS PARIS - ALTERNANCE - ASSISTANT NEW BUSINESS (F/H) (12-24 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the HAVAS PARIS - ALTERNANCE - ASSISTANT NEW BUSINESS (F/H) apprenticeship at Havas in Puteaux, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in business development at a company I can build a career with rather than pass through.

Havas wins work by convincing a client its recommendation beats four other agencies', and new business is where that argument actually gets made — against a deadline, with the competitive picture as the raw material. The role itself covers coordinating the agency's responses to the RFPs it competes for, and the prospecting that comes before them. Answering RFPs is the mirror image of what I did at GEP Worldwide, where I drafted the RFIs, RFQs and RFPs and analysed what came back, and competitive analysis is my daily work at FORVIA.

I have carried commercial responsibility directly. For two years at Endosys Technologies I marketed products through conferences, meetings and demonstrations, held the customer relationships myself, and fed what I heard back into the product — one lock design change I proposed raised sales volumes by 20%. That is the part of business development I care about: the loop from customer conversation to product decision to revenue. At FORVIA I now work the same question from the strategy side, studying new markets and how product lines are positioned within them.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
