Renault Group — Recruitment Team
Guyancourt

Re: Application for APPR - BAC+5 - Chef de projet achats industriels F/H (12 months apprenticeship, starting September 2026)

Dear Hiring Manager,

I am applying for the APPR - BAC+5 - Chef de projet achats industriels F/H apprenticeship at Renault Group in Guyancourt, starting September 2026. I have three years of experience across business development, consulting and analysis, most recently as a Strategy and Marketing Corporate Consultant at FORVIA in Paris, and I am looking for an apprenticeship in purchasing at a company I can build a career with rather than pass through.

Renault is running two transitions at once — electrification and a wider platform consolidation across the Alliance — which puts unusual pressure on every sourcing decision to be right for a product line that may not look the same in three years. The role itself covers industrial purchasing project work, requiring strong English (TOEIC 850) alongside Excel and PowerPoint — buying decisions that have to hold up against a moving target, not a fixed spec.

Purchasing is where my experience is most directly transferable. At GEP Worldwide I drafted RFIs, RFQs and RFPs, analysed the responses, and ran the market research behind a car-fleet procurement decision that saved a client 6%. At FORVIA I now produce competitor and cost analysis that Purchasing uses alongside Finance, M&A, Sales, R&D, Operations and Legal, so I am used to sourcing questions being argued across functions rather than settled inside one. My two years at Endosys Technologies were spent on the supplier's side of that table, negotiating and holding commercial relationships, which is a useful thing to have seen before sitting on the buyer's side of it.

I am currently completing a Master in Management at ESSEC Business School, with coursework in Strategy and Management, Marketing Management, and People and Organizations. Before that I completed a B.Tech in Mechanical Engineering at the National Institute of Technology Calicut (ranked #21 in India, NIRF 2025), covering Operations Research, Project Management, Supply Chain Management, Quality Planning and Analysis, and Management of Production Systems. The engineering degree is where my analytical edge comes from — it taught me to break a problem down to what can actually be measured before arguing about it — and ESSEC has given me the strategic and commercial judgement to put that to work.

I am available from September 2026 and would welcome the chance to discuss how I could contribute to your team. Thank you for considering my application.

Sincerely,
Giridhar Dhananjay Khaza Venkata
